2022-05-28 22:10:01 5100 [Note] Recovering after a crash using mysql-bin

2022-05-28 22:10:01 5100 [Note] Starting crash recovery...

2022-05-28 22:10:01 5100 [Note] Crash recovery finished.

InnoDB: Error: tablespace id is 2722 in the data dictionary

InnoDB: but in file ./kk_jmdn_cn/mac_vod_search.ibd it is 3227!

2022-05-28 22:10:01 2b6f559e1700 InnoDB: Assertion failure in thread 47757177788160 in file fil0fil.cc line 805

InnoDB: We intentionally generate a memory trap.

InnoDB: Submit a detailed bug report to <http://bugs.mysql.com>.

InnoDB: If you get repeated assertion failures or crashes, even

InnoDB: immediately after the mysqld startup, there may be

InnoDB: corruption in the InnoDB tablespace. Please refer to

InnoDB: <http://dev.mysql.com/doc/refman/5.6/en/forcing-innodb-recovery.html>

InnoDB: about forcing recovery.

14:10:01 UTC - mysqld got signal 6 ;

This could be because you hit a bug. It is also possible that this binary

or one of the libraries it was linked against is corrupt, improperly built,

or misconfigured. This error can also be caused by malfunctioning hardware.

We will try our best to scrape up some info that will hopefully help

diagnose the problem, but since we have already crashed,

something is definitely wrong and this may fail.

key_buffer_size=268435456

read_buffer_size=786432

max_used_connections=0

max_threads=200

thread_count=0

connection_count=0

It is possible that mysqld could use up to

$\text{key_buffer_size} + (\text{read_buffer_size} + \text{sort_buffer_size}) * \text{max_threads} = 571900 \text{ K}$ bytes of memory

Hope that's ok; if not, decrease some variables in the equation.

Thread pointer: 0x0

Attempting backtrace. You can use the following information to find out where mysqld died. If you see no messages after this, something went terribly wrong...

stack_bottom = 0 thread_stack 0x40000
